Mobile Wire Rope Measuring System

MSM 12: Mobile Control Unit

LSM 1: Mobile Rope Load Sensor

The Henning rope-tension measuring system embodies a new measuring principle: At each rope, an individual load sensor is mounted. The LSM1 can be used with different rope type and diameters. The new measuring principle not only allows you to measure each rope-tension but also the cabweight/counterweight. It also gives you the possibility to set the optimum rope-tension very quickly and easily.

Key Features

LSM1:

- Suitable for use with different rope diameters and types from 6-16 mm.
- No calibration necessary
- Time-saving rope tension check

MSM12:

- USB-port, Bluetooth (optional)
- Internal wizard for optimum rope-tension settings
- Stores up to 100 measurements
- Big display with backlight
- Easy to handle
- Time-saving rope tension check

This device is portable and rugged for outdoor use.

LiftPC Mobile Diagnosis

The Lift PC Mobile Diagnosis is a powerful measuring system with a modular structure for mobile and flexible measurement of elevator performance and ride quality. It can be used with any laptop or with our hand-held terminal HT1 with connected 3D acceleration sensor QS 2.0. Performance data and ride quality of the elevator can be precisely determined, meeting ISO 18738 and GB/T1 0058-1997 standards. Lift PC Mobile Diagnosis can be used for both rope and hydraulic elevators.

Key Features

- Quick elevator diagnosis
- Cost-effective
- Versatile system approach
- 3D acceleration sensor
- Noise module class 2
- Hand-held terminal HT1 (optional)
- Bluetooth module (optional)
- Database module (optional)

More Than Cable. Lots More.

Part Number	Description
MSM12	Mobile Wire Rope Measuring System
LSM1	Lift PC Mobile Diagnosis
